Query results operations

Orders table

The image shows two screenshots of the phpMyAdmin interface. The top screenshot shows the 'Structure' tab for the 'orders' table in the 'datadigger' database. The table has been created with the following structure:

```
CREATE TABLE orders( Order_id INT PRIMARY KEY, Customer_id INT, Order_date DATE, Total_amount Decimal(10,2), FOREIGN KEY (Customer_id) REFERENCES customers(Customer_id) );
```

The bottom screenshot shows the 'SQL' tab where an INSERT query was executed, resulting in 5 rows being inserted. The query and its results are as follows:

```
INSERT INTO Orders VALUES (201, 101, '2026-06-01', 1500.00), (202, 103, '2026-06-05', 2200.50), (203, 101, '2026-06-10', 800.00), (204, 104, '2026-06-12', 3500.75), (205, 105, '2026-06-15', 1200.25);
```

The data inserted into the 'orders' table is as follows:

Order_id	Customer_id	Order_date	Total_amount
201	101	2026-06-01	1500.00
202	103	2026-06-05	2200.50
203	101	2026-06-10	800.00
204	104	2026-06-12	3500.75
205	105	2026-06-15	1200.25
